Inventory: the artifacts that will benefit the society in the next few years

When it comes to the past, everyone seems to be wise after the fact. Without finger counting, everyone knows everything, everything, gossip and private life. What about the future?

It's said that people will always be afraid of the unknown. So think carefully, the unknown, the one that can help you, only the good and the bad. Will you still be afraid of such things when you imagine them?

The answer, of course, is No. So, people have a choice about the fear of the unknown. When you know that it can bring benefits to you, undoubtedly your brain will start to reduce exclusion. When you know that it can help you, your brain will gradually relax its vigilance. Even if you haven't seen it, you will slowly put the fear behind you until you see it, you have completely Don't panic because you've embraced the good thing.

So the following, in the next few years, can benefit the society and bring you benefits. Will you accept it?

It can be used in meetings, tourism, teaching, lectures, reception and training; it can be used in government agencies, public institutions, exhibitions, factories, workshops, temples, law conferences, and projects.

It is composed of three parts, transmitter, receiver and charging box. The integrated design is very convenient to carry. It can also speak for one person and listen to thousands of people at the same time.

It uses the 2.4G international general frequency band, anti-interference, anti series frequency, which can make the signal more stable when you use it, each device is an independent ID, without frequency hopping; noise reduction audio IC, with clear sound quality and no noise, can create a quiet atmosphere for you and others no matter where you go.

Its transmitter supports one key connection, one key shutdown, one key mute and other shortcut keys, which can replace the two operations of the receiver, and will not cause any trouble and difficult to deal with.

Its charging air box can also charge 52 receivers and 2 transmitters at one time, the charging time is only 1.5 hours, and the endurance working time of the transmitter and receiver can reach 10-20 hours, which can be used in any long-term application occasions, and the air box is equipped with purple light lamp and negative oxygen ion, which can directly sterilize and eliminate taste while charging.

This is a magic device that can benefit the society in the future. It can not only get rid of the loud noise and interference of the traditional megaphone, but also directly save a long time of power line management.

Do you know? It's called the keyinda wireless interpreter.
