PC / ABS is a kind of modified engineering plastics synthesized by mixing. Among them, PC is polycarbonate, ABS is acrylonitrile (a) , Butadiene (b) and styrene (s) copolymer. This kind of modified plastics has better performance than PC and ABS, for example, impact resistance, heat resistance, hardness and so on. ABS Plastics, features: 1. Good comprehensive properties, high impact strength, chemical stability, good electrical properties. 2, with 372 plexiglass fusion good, made of two-color plastic parts, and can be surface chrome plating, spray paint treatment. 3. High Impact Resistance, high heat resistance, flame retardant, reinforced, transparent grade. 4, mobility than HIPS a little worse than Pmma, PC, good flexibility. PC / ABS, Polycarbonate and acrylonitrile-butadiene-styrene copolymers and blends, are thermoplastic plastics made from Polycarbonate and polyacrylonitrile alloys that combine the best properties of both materials. PC / ABS is a kind of modified engineering plastics synthesized by mixing. Among them, PC is polycarbonate, ABS is acrylonitrile (a) , butadiene (b) and styrene (s) copolymer.
