Overview:

DDR4 RDIMM VLP is a compact and a very low-profile module that offers the industry's fastest memory speed with 2666MT/s, and it is fully compatible with the Intel Purely platform and 1U devices. The modules come equipped with 30 μ " Gold Fingers and include single bit error correction and a register to enhance clock, command, and control signals. All are available in 4GB, 8GB, 16GB and 32GB capacities. 2133MT/s and 2400MT/s modules are also available.

VLP DIMM modules are specialized for use in 1U systems, such as blade server data centers, where system height is lower than 1.18 inches. The design of these modules improves airflow inside the system and reduces thermal impact.

ECC modules are designed to detect and correct single-bit errors that occur during data storage and transmission. ECC modules use Hamming Code or Triple Modular Redundancy for error detection and correction, and manage error corrections on their own, without requesting that the data source resend original data.
