Company Brusatori was born in 1953 as a manufacturer of AC motors. As time goes by market demand urges Brusatori partners Giovanni and Carlo, as well as brothers, with their sons, into developing the still up-to-date DC motor. First the company creates a round cage series, self-ventilated and servo-ventilated, then the more efficient servo-ventilated motors with square cage. In the last few years industrial automation requires more developments, so new series of motors are manufactured: DC permanent magnet motors, square cage AC motor suitable for inverter vector control and finally different series of brushless motor still the carrying out of pitch control systems designed for wind power towers. The considerable company flexibility allows to face many different markets and applications. Today Brusatori S.r.l. supplies all known production sectors as food companies, printing machines, machine tools and also wind power sector, which is increasing more and more. Extremely short delivery time together with ISO, CE, UL certifications allow the company to satisfy all market demands, maintaining very high qualitative standards with machines that were built in the eighties and are still efficiently working.
