EXIDE GEL batteries have been developed for special vehicles such as Firefighters , police ,emergency services , military , industrial and commercial vehicles , with high energy requirements to provide energy . They provide reliable starting power and maximum supply energy for high cyclic stresses in the professional field . Compared to the HD truck starter battery ,the EXIDE GEL is at the same depth of discharge a lot higher number of cycles and increases their first cold start performance, in order then to keep it constant over the entire service life. They are designed to offer high installation flexibility (in the passenger compartment or in storage boxes with a space savings of up to 30%) advantages in maintenance (absolutely maintenance free , suitable for long life) and robustness (high vibration and tilt resistance, spill and leak proof) . The gel technology (gel electrolytes) with a Ca / Ca alloy and oneregulated by a valve , VRLA ventilation covers a Wh - power range from 450 to 2400Wh and thus offers a wide range of modern and sophisticated applications and BOS vehicles.
